

Webroot® Email Archiving Service

Protect Data. Simplify Management. Reduce Costs.

Email volume is exploding and regulations for e-discovery requests are stricter than ever. Webroot® Email Archiving Service helps you securely retain data, meet compliance, and simplify mailbox management—all at a fraction of the cost of an on-premise system.

Webroot Email Archiving Service

KEY BENEFITS

KEY FEATURES

SIMPLIFY MAILBOX MANAGEMENT

- Eliminate the need for mailbox quotas and PST files with unlimited data storage
- Minimize training with a familiar, easy-to-use interface
- End-users can quickly search and retrieve any message ever sent or received
- Avoid help desk calls with self-service email store

ACCELERATE E-DISCOVERY

- Search all email messages and attachments
- Rapid retrieval in just seconds
- Flag messages (e.g., attorney-client privileged)
- Automatically monitor email for policy violations

MEET COMPLIANCE

- Securely and automatically capture messages
- Comply with regulations and data retention policies
- Set retention policies to meet specific industry requirements
- Enforce legal holds, audit trails and chain of custody

REDUCE COSTS

- No upfront licensing or hardware costs
- Lower Total Cost of Ownership (TCO)
- Fast deployment
- Utility pricing model with no additional storage fees

HOW IT WORKS

- ✓ Email messages are captured by your email server once they are sent and received.
- ✓ Messages are journaled and securely transmitted to the Webroot Email Archiving Service using either TLS or SSL encryption, depending on customer requirements.
- ✓ Emails are captured in real time by Webroot and immediately encrypted and replicated across geographically dispersed data centers.
- ✓ Users can access the archive and locate specific messages from any browser.
- ✓ Administrators and delegated authorities receive advanced search capabilities for rapid email retrieval and expedited e-discovery.

Webroot Email Archiving Overview

Key Features

Simplified Mailbox Management

Simplify mailbox management and minimize training with a familiar, easy-to-use interface. End-users can access email archives from any browser to quickly find specific messages and attachments based on a variety of criteria. Granular permissions enable administrators to centrally deploy access to some or all users. End-users can also access their personal archive from any location via a secure, web-based portal.

Unlimited Data Storage

Dramatically reduce storage costs and eliminate the need for mailbox quotas with unlimited archive storage in the cloud. Webroot Email Archiving Service automatically captures all sent and received messages without requiring any user intervention. You can eliminate user PST files, which not only minimizes the management burden on your IT staff, but also improves server performance.

Expedited E-Discovery

Ensure that your organization is prepared for any e-discovery request by storing and indexing every email, IM, and attachment in one centralized online repository. Real-time search and retrieval capabilities accelerate legal discovery and HR inquiries by providing quick access to archived data, significantly reducing the time and expense associated with e-discovery requests. To protect sensitive communications, users can flag attorney-client privileged communications, which are excluded from e-discovery requests.

WHY USE EMAIL ARCHIVING AS A SERVICE?

- ✓ Avoid the high fees for delayed responses to e-discovery requests.
- ✓ Meet compliance regulations without incurring the high expenses of on-premise deployment.
- ✓ Save time and money with low upfront costs, a lower total cost of ownership (TCO) and simplified management.
- ✓ Deploy the solution across your organization in a few short days, rather than weeks or months.

Email Compliance

Meet compliance regulations by automatically retaining all emails and attachments. Webroot Email Archiving Service provides the capability to index, search and audit all email and attachments so that organizations can quickly respond to regulatory requests. Administrators can set retention policies to meet their company's specific retention or regulatory requirements, and automatically monitor and review email and attachments to ensure policy compliance.

Protection of Company Data

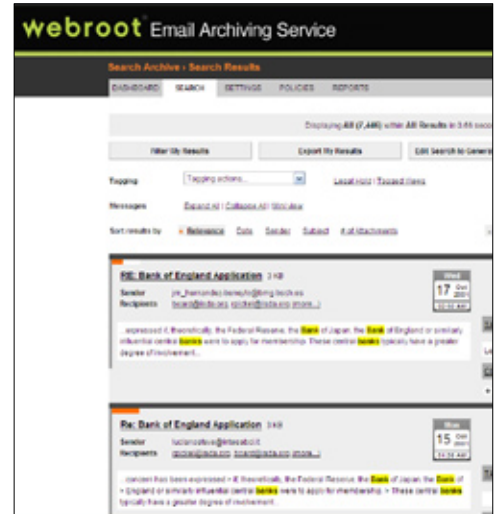

Webroot Email Archiving Service protects sensitive corporate information with the industry's highest standards for secure data storage. All email messages and attachments are securely transmitted via TLS or SSL encryption, then captured and encrypted automatically to guarantee the security of your archived data. Messages are also replicated across geographically dispersed data centers for enhanced protection.

Complete Email Security

Integrate Webroot Email Archiving Service with **Webroot® Email Security Service** for complete data security and messaging protection. Like Webroot Email Archiving Service, Webroot Email Security Service does not require any additional hardware or software. Key features include award-winning anti-spam and antivirus protection, email content scanning, data loss protection, business continuity and policy-based email encryption. Visit www.webroot.com/business for more information and a free trial.

Fast Deployment and Guaranteed Service Availability

Webroot Email Archiving Service provides rapid deployment and guaranteed service availability that an on-premise system simply cannot match. Deployment can typically be complete in less than one week and there are no costly hardware, software, or equipment maintenance fees. Webroot also guarantees 99.99% service availability to ensure that customers have consistent, reliable access to a secure email archive environment.

Easily search archived email and retrieve sortable results in just seconds.

WHY WEBROOT?

Webroot is a global company with a history of delivering innovative security solutions to millions of businesses and consumers. Our best-of-breed technology has won numerous awards and our SaaS solutions protect over three million users worldwide. As one of the largest privately held companies in the Security SaaS market, Webroot has multiple data centers and support offices across the US, Europe, Japan and Australia. To guarantee the highest level of service, all Webroot Security Services are backed by local technical support teams and Service Level Agreements (SLAs) that are among the best in the business.
